- iCloud Private Relay

- Safety Check

- Lockdown Mode

Find My & Activation Lock

Lecture

Activation Lock

- Anti-Theft feature that requires an Apple Account sign-in to activate the device even if it's restored to factory settings.

- Unless managed by MDM, only Apple can by-pass Activation Lock and they require a form of proof of purchase to do so.

- An activation locked device will boot up after a restore and prompt for an Apple Account email address and password to continue with device setup.

- For more information about Activation Lock, consult Apple's documentation (linked in Resources).
