Managing Passwords & Passkeys

Lecture

Passkeys

- Passkeys are replacements for traditional passwords.

- Passkeys can be saved to your Keychain just like usernames/passwords are today but are more secure and convenient to use.

- To use a Passkey, you must authenticate using Touch ID or Face ID.

- Passkeys require iOS 16 or macOS Ventura or later. iCloud Keychain and Two Factor Authentication is also required.

Passkeys on Managed Devices

- Organizations can use MDM to generate Passkeys for Managed Apple Accounts.

- Passkeys for Managed Apple Accounts cannot be shared.

- MDM Administrators can configure devices to securely generate a passkey for a user when they visit specific websites.

- MDM Administrators can also restrict those passkeys from being used on un-managed devices.
